

A DIFFERENT TYPE OF COMPOUND WORD

SUSAN THORPE

Great Missenden, Buckinghamshire, England

thorped@hotmai.com

The elemental symbols which make up certain chemical compounds will transpose into words. For example, the formula of LEAD MONOXIDE is PbO which, transposed, makes BOP.

The two words made from each of the five pairs of compounds below rhyme.

SODIUM FLUORIDE	NaF	=	<u>FAN</u>	SODIUM CHLORIDE	NaCl	=	<u>CLAN</u>
STANNIC OXIDE	SnO ₂	=	SOON	MANGANESE DIOXIDE	MnO ₂	=	MOON
MERCURY OXIDE	HgO	=	HOG	MAGNESIUM OXIDE	MgO	=	MOG
SILVER BROMIDE	AgBr	=	BRAG	SILVER CHLORIDE	AgCl	=	CLAG
BARIUM OXIDE	BaO	=	BOA	SODIUM HYDROXIDE	NaOH	=	NOAH

OTHER CHEMICAL COMPOUND WORDS

THORIUM DIOXIDE	ThO ₂	=	HOOT
CARBON DIOXIDE	CO ₂	=	COO
DEUTERIUM OXIDE	D ₂ O	=	ODD
LITHIUM OXIDE	LiO ₂	=	OLIO
IRON PYRITES	FeS ₂	=	FESS
SODIUM SULPHIDE	Na ₂ S	=	ANNAS
ZIRCONIUM DIOXIDE	ZrO ₂	=	ZORO
FORMIC ACID	HCOOH (or HCO ₂ H)	=	HOOCH
